

PRODUCT DESCRIPTION

Bondloc Epoxy Repair Putty is a steel-filled, professional epoxy putty for general maintenance and repairs.

APPLICATIONS

Excellent for filling holes in castings and rebuilding metal surfaces. Can be sanded, drilled, machine and painted once cured. It resists gas, oil, diesel, petrol, water and coolant (anti freeze). Can resist temperatures up to 100°C

INSTRUCTIONS FOR USE

Proper surface preparation is essential to a successful application. The following procedures should be considered: Degrease the surface, oil, grease and dirt must be removed before applying any epoxy material.

All surfaces must be thoroughly roughened ideally by grit blasting (8-40 mesh grit), or by grinding with a coarse wheel or abrasive disc pad. An abrasive disc may be used provided white metal is revealed. This creates increased surface area for better adhesion. A 3-5 mil profile is desired for an application. Do not "feather edge" epoxy materials. Epoxy materials must be "locked up" by defined edges and a good 3-5 mil profile. Metal that has been handling sea water or other salt solutions should be grit blasted and high-pressure water blasted and left overnight to allow any salts in the metal to "sweat" to the surface: repeat blasting to "sweat out" all the soluble salts. A test for chloride contamination should be performed prior to any epoxy application. The maximum soluble salts left on the substrate should be no more than 40p.p.m (parts per million).

Under cold working conditions, heating the repair area to 38°C - 43°C immediately before applying is recommended. This procedure dries off any moisture, contamination or solvents and assists the epoxy in achieving maximum adhesion to the substrate. All prepared surfaces should be repaired as soon as possible, to eliminate any changes or surface contaminants.

Epoxies are very good in water, saturated salt solutions, leaded gasoline, mineral spirits, ASTM # 3 oil and propylene glycol. Epoxies are generally not recommended for long term exposure to concentrated acids and organic

solvents. For immersion applications this product is not recommended.

Technical Data Sheet

Auto001 Epoxy Repair Putty Steel

Twist or cut off required amount from stick. Then knead with fingers to a uniform colour. All black colour dye must be gone and a uniform pure grey colour is left. Apply to surface to be repaired within 2 minutes of mixing. The mixed epoxy does not show much bond strength at this time, but can be kneaded or formed into any cracks or holes to be filled.

TECHNICAL FEATURES

Typical Properties	7 days cured at 24°C
Colour	Grey
Viscosity	Putty
Pot Life @24°C	20 mins
Comprehensive Strength	83 N/mm²
Adhesive Tensile Shear	5 N/mm ²
Cured Hardness Shore D	75
Dielectric Strength volts/mil	300
Solids	100%
Temperature Resistance	121°C Continuous 149°C Intermittent

CHEMICAL RESISTANCE

7 days room temperature cure (30 days immersion)

· days room temperature care (radys room temperature care (50 days mimersion)	
10% Sulphuric Acid	Fair	
10% Hydrochloric Acid	Fair	
Chlorinated Solvents	Very Good	
Methanol	Very Good	
Toluene	Very Good	
Ammonia	Very Good	
10% Sodium Hydroxide	Excellent	
Kerosene	Very Good
